Serious Odor-Fighting Weapons

We've expanded our popular line of odor-absorbing carbon Can Filters to include the full-range of 38 Special Filters. Designed for commercial or light-industrial use and just as effective at neutralizing persistent greenhouse and household aromas, each 38 Special comes complete with manufacturer recommended flange and pre-filter.

Stock#	Description	CFM	Approx. Weight	Fan Compatibility	Outside Diameter	Height	Price

Ozone for Clean Air

Eliminate odors caused by tobacco smoke, mold, mildew, pets, cooking and dampness with ozone. Ozone (O₃) doesn't just mask odors as air fresheners do; it neutralizes them by combining with molecules in the air and converting them into harmless carbon dioxide, water, and oxygen. Ozone also kills bacteria and viruses through oxidation. Using an ultraviolet light to create ozone, Uvonair units work silently and install in minutes. The Uvonair 1000 is for rooms up to 1,000 cubic feet, Uvonair 3000 is for rooms up to 3,000 cubic feet, and Uvonair 5000 is for rooms up to 5,000 cubic feet. Each Uvonair includes detailed instructions. Use with a timer is recommended to regulate ozone levels in the affected area. Replacement lamps for Uvonair units are available separately. Units and replacement lamps are covered by a one-year warranty.

UVO600	Uvonair 1000	\$205.95

Get Air Clean with Ozone

Uvonair Duct Units use the power of ozone to purify and deodorize the air as it flows through exhaust ductwork. In-line units eliminate the risk of ozone damage to plants and people by treating the air after it leaves the growing area. Corona Discharge (CD) Units provide maximum levels of ozone production. Unlike other similar products on the market, state-of-the-art Uvonair CD generators are maintenance-free. The 8" Uvonair Corona Discharge unit purifies air in areas up to 20,000 cubic feet. All units have high and low settings to customize ozone output and carry a one-year manufacturer warranty. Use duct adapters to fit to smaller or larger ductwork. Air must be vented to the outside only.

UCDD600	Uvonair Corona Discharge, 8"	\$489.95

Simple, Safe Odor Control

The compact Ozone Generator 1 neutralizes persistent odors by physically changing their chemical composition via an ultraviolet light. An economical option for ozone generation, this 25" x 4" x 2" unit can be mounted on a wall to control odors within a 5,500 cubic-foot area or positioned within a sturdy air duct. To reduce the risk of over-exposure, we recommend running the Ozone Generator 1 on a timer. Manufactured in the U.S. with only UL-listed components, the Ozone Generator 1 is backed by a three-year warranty; the ultraviolet bulb has a six-month guarantee.

OG600	Ozone Generator 1	\$179.95

Hunt Down Odors with the Air Tiger

Rather than merely covering up odors, the Air Tiger 1 eliminates odors by generating ozone that bonds with odor molecules and neutralizes them. It's also a very effective disinfecting agent and will kill germs, viruses, bacteria, molds and yeasts. Use it in your indoor garden, pet kennel or anywhere odors are a problem. The Air Tiger 1 is compact, energy-efficient and features easy lamp replacement. One-year warranty on the Air Tiger 1 and six-month warranty on the replacement lamp.

ATO600	Air Tiger 1 Ozone Generator	\$199.95
ATO605	Air Tiger 1 Replacement Lamp	44.95

First of Its Kind

The Air Maid Ozone Generator effectively eliminates odors and destroys air-borne bacteria and viruses through the process of oxidation. The Air Maid is equipped with a programmable timer allowing up to eight cycles per day, seven days a week and an adjustable ozone output control to accommodate any room size. Compared to generators that use costly ultraviolet bulbs, the Air Maid silently produces 50 percent more ozone using an inexpensive, easy-to-change ceramic discharge plate. Portable or wall-mounted, the Air Maid Ozone Generator measures 8 1/4" x 5 1/2" x 3" and is available in small (output range of .02 mg to 40 mg per hour) and large (output range of .02 mg to 70 mg per hour) sizes.

AMOG670	Air Maid Ozone Generator, large	359.95

Odour Neutralizing Agent

ONA Breeze

Neutralize and Deodorize

ONA (Odor Neutralizing Agent) products are designed using scientific principles of molecular bonding. ONA's active ingredients come from a blend of essential oils and plant-derived compounds that bond with and neutralize a wide array of odors. Simple ONA Blocks can be placed in a room or ventilation ducting to control unpleasant odors. ONA Gel is saturated with ONA liquid concentrate; simply remove the lid and expose it to the air to remove odors from the source. As the gel dries out, add some ONA Liquid Counteractant Concentrate every four to five weeks to maintain effectiveness. The battery-operated Ona Breeze disperses the odor-neutralizing power of a four-liter ONA Counteractant Gel (sold separately) to treat areas up to 1,500 square feet for a period of three- to six-weeks, depending on factors like temperature and humidity.

Odor is No Match for the Carbonair!

The Carbonair kills odor in two different ways for double the odor-controlling power. It pulls air through two 6" ports, filters it through a carbon filter, then moves air via a 450 CFM fan through ONA air-freshening gel (included). The Carbonair attaches to vent systems to thoroughly cleanse your air.

CAR600K Carbonair.....\$749.95

A Bright Idea for Odor Control

Featuring a specialized titanium dioxide coating, the 23-watt Ozone Compact Fluorescent Bulb provides an innovative and inexpensive alternative to ionizers and costly air purifiers. The Ozone Compact Fluorescent Bulb emits a light output equal to a 100-watt incandescent bulb and simultaneously eliminates airborne bacteria, mold, viruses, fungi, smoke and household odors. Fits almost anywhere a standard light bulb can be used. The bulb must operate in an open fixture to be effective.

OCFB700 Ozone Compact Fluorescent Bulb, 23W.....\$39.95

TMP700

Timed Application of Pesticide or Deodorizer

The TimeMist Plus® Dispenser automatically releases a pre-programmed dose of insecticide or air freshener every 15 minutes and can even be programmed to your own customized settings. Purge III® insecticide is FDA-approved for use in food preparation areas and is recommended for safe control of small flying pests such as flies, gnats and mosquitoes. Each refill lasts 30 days. To eliminate odors in the greenhouse or home, use with one of our Ozium 3000® or TimeMist air sanitizers/fresheners. The unit alerts you when additives and batteries reach low levels and includes a five-year manufacturer's warranty. Insecticide, air freshener and "C" batteries are not included with dispenser. The Ozium Starter Kit includes a fully automatic, wall-mountable TimeMist unit (that dispenses every 15 minutes, 24-hours a day for 30 days), Ozium original scent, and Ozium fresh citrus scent formulas in 6.4-ounce canisters.

One Spray Keeps Odors at Bay

Need some fresh air? Unlike deodorizers, Ozium actually treats the air by killing bacteria that cause odors and disease and removing smoke particles for clean, fresh, breathable air. Keeps the air fresh for up to three hours. Its clean, light fragrance makes it the number one choice for use in hospitals, schools and offices.

OZ620	Ozium 7000, 14 1/2 oz	\$14.95

Solid Odor Control

You can banish bad smells associated with smoking, pets, cooking, restrooms, and much more with Smells BeGone Odor Absorber 15-ounce solid block. Safe and non-toxic, Smells BeGone traps odors and replaces them with a fresh, clean scent. Smells BeGone Odor Absorber can cover up to 400 square feet for three months or more.

SBOA610 Smells BeGone Odor Absorber, 15 oz solid.....**\$6.95**

Assassin for Hire

You can easily eliminate unpleasant odors—anywhere, anytime—with orange scented Odor Assassin. One quick spritz immediately removes unwanted odors and, for maximum control, the fresh citrus aroma of Odor Assassin can be released every 15 minutes via an automatic dispenser. Each can contains approximately 3800 metered releases.

OOA700 Orange Odor Assassin, 7.25 oz.....**\$5.99**

Odor Control Overview

Indoor gardeners know the right mixture of high humidity, organic fertilizers and hydroponics nutrients can turn an otherwise pleasant spot musty in a hurry. Fortunately, there are odor control methods available to eliminate even the funkier of funks. From simple to state-of-the-art, they range in price and application, but many odor control techniques including natural air fresheners, ozone generators and carbon filters can effectively neutralize the not-so-fresh smells in your greenhouse or home in no time.

Natural Neutralizers

Natural air fresheners are inexpensive, safe, and come in a variety of forms. Some act as masking agents, but products like Ozium actually neutralize odors by bonding with them on a molecular level. Available in spray, liquid, or gel forms, these methods can be used by themselves or in conjunction with misting systems or humidifiers which can increase their efficacy. With continued use, neutralizer gels will dry out and lose potency but refill products are available to refresh them. Natural air fresheners and odor neutralizers typically work best in smaller areas.

Ozone Generators

Ozone generators like our Uvonair units (page 74) take oxygen from the air, transform some of that oxygen into ozone, and then release the ozone back into the air. Because an ozone molecule is made up of three oxygen atoms, ozone is naturally unstable; each ozone molecule works to release its extra atom to become oxygen again. The atoms released combine with organic compounds in the air changing their chemical makeup and, thus, neutralizing their odors.

When it comes to ozone generators, it's important to note that the popular notion "More is better" doesn't apply. The FDA has set a limit of 0.05 parts per million of ozone in indoor air, and, because too much ozone can be harmful to you and your plants, ozone generators should be used with a timer for safe measure.

Carbon Filters

If you have particularly persistent garden and household odors, activated carbon is yet another excellent means to neutralizing the air. Through a process known as adsorption, activated carbon attracts, bonds, and traps the odor elements through tons of tiny pores on its surface. Activated carbon is most effective when packed tightly into a unique type of filter and used in conjunction with a specialized fan to pull the stagnant air through the filter, as is the case with Can Fan Combos (page 72). These combos come in several sizes to accommodate different sized areas and can eliminate odors for up to 18 months. The separate fan and filter components are also available individually to create your own customized set-up.
