## Raised Garden Beds Do-It-Yourself Kits

### The Gardening Advantage

- Easy to work with 42" inside width and 30" height
- Numerous irrigation advantages reduced and soil compaction
- Sheds excess moisture better than ordinary garden beds
- Soil stays loose as you are not compacting it through walking
- Increases productivity per square foot (produce 1.4 to 2 times more vegetables and/or flowers per square foot)
- No need to allow space for walking
- Reduces weeding
- Extended gardening season, due to the tendency to warm a little sooner in the spring and remain productive into the fall
- Problems of pool soil or soil borne diseases can be overcome
- No bending or kneeling
- No harmful chemicals, unlike treated lumber

### Advantages for YOU the Gardener

- Brings your garden closer to you
- Bending reduced, therefore, no need for sore back and knees
- All your gardening can be done from the garden path
- Brings more order and a pleasing geometry to your garden
- Makes gardening accessible to physically challenged people
- No damage to plants due to unwelcome animals

### Roof Top Gardening Advantages

- Aids in the production of better air quality.
- Planting a roof top garden protects and insulates roof system.
- Aids in lowering urban temperatures. How? Paved surfaces retain heat. Similar to the experience of walking on a paved driveway on a hot summer day vs. walking the grass in a park. The heat is retained on the driveway.
- Provides better storm water management through the fact that the gardens will absorb more water and therefore reduce the runoff water from the buildings.
- Reduces the buildings cost of air conditioning.
- Easy to move the system if repairs are needed to the roof.
- The variety of sizes and configurations can be designed for a multitude of roof environments.
- Garden Wall System can be also added as an edging system.

# Raised Garden Bed Soil Trays

The Raised Garden Bed Soil Tray is designed as a hollow (double walled) part and is included in your Raised Garden Bed Kit. The water is stored in the Soil Tray within the walls of the tray. There is a partial barrier, dividing the Soil Tray down the middle, therefore, it is recommended that both sides of the tray be filled with water separately to ensure complete filling of the Soil Tray.

The Soil Tray is designed to ensure that the soil has access to all of the water contained within the Soil Tray. As such, the floor of the tray has 4 (four) recessed slots providing access to the water. The water enters the soil from the bottom of the Soil Tray encouraging deep root growth and larger healthier root crops such as carrots, radishes, beets etc.

To ensure no soil or sediment gets inside the water storage area, of the Soil Tray, all water inlets/outlets have a geo-textile filter. These filters must be installed in the Soil Tray before filling the tray with soil.

The Soil Tray is designed to permit more than one Soil Tray to be placed end-to-end allowing for 8', 12', 16' etc. Raised Garden Bed configurations. All necessary hardware is provided to link the Soil Trays together as one continuous length. Please note that each Soil Tray must be filled separately with water as there is no transfer of water between trays.

The Soil Tray is at maximum water capacity (approximately 10 gallons) when water is heard to be spilling from the water overflow drains.

Obtaining necessary permits is the sole responsibility of purchaser. Customers agree to hold ScreenHouses Unlimited and manufacturer free of any liability for improper installation, maintenance and repair.

We accept VISA, MasterCard and PayPal payments
