

2007 LEXUS **RX Hybrid** Airbag System

The RX 400h's sophisticated network of sensors and airbags⁷ is designed to help enhance passenger protection should a collision occur. Depending on factors such as crash severity and driver's seat-track position, the advanced driver's dual-stage airbag⁷ deploys at a higher or lower speed to help provide an appropriate level of occupant restraint. Similarly, the advanced front passenger's dual-stage airbag⁷ uses occupant sensors to determine if a deployment is appropriate, and crash severity sensors to determine whether to deploy the airbag at higher or lower speeds. The 2007 RX 400h also features front seat-mounted side airbags⁷ that are larger than conventional side airbags⁷ and designed to help protect the torso, abdomen and pelvis. And rounding out this comprehensive system are front and rear side curtain airbags⁷ with rollover sensors and a driver's knee airbag.⁷ Of course, as impressive as it is, the RX 400h's airbag system⁷ is one feature we hope is never needed.

⁷See page 14 for more information.
