

## ACT Flywheels

Finally, ACT offers eXACTly what performance enthusiasts need: all the benefits of a premium quality light weight flywheel at an affordable price.

Most stock flywheels are heavy cast iron parts designed for optimum street driveability by soaking up some of the power from the engine and putting it in storage in the form of inertia. Although this may be important for transporting the groceries, this driveability comes at the expense of engine response and acceleration. Lightweight flywheels keep less inertia in storage but the lighter rotating mass provides significantly improved engine response and acceleration characteristics. Until now most aftermarket flywheels for sport compact vehicles presented certain undesirable concessions to the user. Many are too light or fragile for the application, others have reliability issues and all are very expensive.

ACT currently manufactures XACT flywheels in two versions, ProLite for road racing applications and very quick throttle response, and slightly heavier StreetLite for street and drag racing vehicles which may require more inertia. For example, the Integra ProLite weighs 8.8lbs and the Integra StreetLite weighs 12.5lbs. Both ProLite and StreetLite flywheels are precision made from Chrome-moly forgings and feature an induction hardened integral ring gear. All ProLite and StreetLite flywheels are CNC machined, heat treated for strength and precision balanced. Substantial material is left behind the clutch surface area for better heat dissipation and durability while weight savings are made where it matters the most for reduced inertia.

XACT flywheels are certified by ACT to meet SFI Spec. 1.1. This makes XACT Flywheels legal for competition when SFI Spec. 1.1 is required or recommended. XACT flywheels come complete with official SFI sticker and serial number as required for certification. Consult the following chart for available applications. Some may still be in development at the time of this printing. Numerous applications not listed are scheduled for release next year.

## ACT Performance Clutches

ACT offers complete performance clutch kits and individual components for import and sport compact applications. ACT offers two pressure plates— ACT Heavy Duty and the ACT Xtreme pressure plate. ACT has several options for the disc: Performance Street Modified Street, Standard replacement, and 6 Pad Race.

Get Power To Your Tires - COUNT ON ACT.

- ACT Heavy Duty Pressure Plates provide increased torque capacity, durability, and extended clutch life. These are new units designed with a 20-50% stronger diaphragm. ACT designs the pressure and release travel of the unit to be in the optimum working range. Every unit ACT produces is accurately balanced and tested for performance. May be matched with the recommended ACT Street Disc or the ACT 6 Puck Race Disc.
- ACT Xtreme Pressure Plates deliver the maximum holding power available! For high horsepower street-cars, combine this high clamp pressure plate with an ACT Street Disc to maintain smooth engagement and high torque capacity. For racing, combine the ACT Xtreme Pressure Plate with ACT Xtreme Race Disc for the ultimate in torque capacity, durability and quick shifting. Used by many of the fastest imports in the world!
- ACT Street Discs are designed for smooth engagement, quiet operation and improved durability using only the best organic, spring center designs. An ACT Performance Street, ACT Modified Street or standard replacement disc is available.
- Attack the track with the ACT Xtreme Race Disc. Shifting is quick and sure due to the lightweight rigid design. ACT Xtreme Race Discs are available in 4 or 6-pads (puck, buttons) are highly durable and resistant to heat. The copper ceramic material holds approximately 28% more torque than an organic lining. ACT Copper Ceramic Xtreme Race Discs engage fairly harsh and are not normally recommended for street use.

## B&M Shifters & Accessories

B&M now offers over 200 manual shifter applications for vehicles around the world. Road or race, B&M has the applications your customers want with the precision control and quality they demand. Beware of imitations! B&M's involvement in the World Challenge Series works to support your efforts, promote and sell the complete line of B&M Manual Shifters.

### PRECISION SPORT SHIFTER

Threaded for use with both factory and aftermarket knobs. CNC machined using super-tough billet alloy steel. Highly polished and show chromed. High performance red silicone bushings provide you with the most accurate shifter available. Reduce throw by over 2" without sacrificing leverage. Designed and engineered to be a direct bolt-in (only tools needed are 10mm and 12mm wrenches). Counter-balanced bottom end provides the most positive and accurate shifts.

### PRO EDGE SHIFTER

By keeping the key features that have made the Edge such a success (such as counter-balanced bottom end) and incorporating a billet aluminum bearing mount (with a trick aerospace polymer spherical bearing), the Pro Edge has become the professional's choice. The CNC machined stick has also been upgraded to 303 billet stainless steel.

Short Leather	80744
Carbon Fiber Look	80745
Billet-look Aluminum	80746

### THE EDGE SHORT SHIFTER SYSTEM

The B&M Edge Short Shifting System shift adapter is CNC machined from aerospace quality 6061-T6 aluminum and allows the user to reduce shift throw by over 25%! It is equipped with a true roller bearing at pivot point for precise shifts. Another innovation not found in other shift adapters is the "neutral adjustment" (45062 & 45063 Only)- this allows the user to custom fit the shifter for a more natural feel.

DESCRIPTION	PART NO.
92-96 Honda Prelude	45063

POWER
POINT

Technical? Yes.      Complicated? No!

It's All In The Physics.

B&M Short Throw Sport Shifters offer a dramatic improvement in shifting performance. This is due in large part to a reduction in shifter travel - or a shift "throw". The shift throw is shortened by changing the stick's pivot point. By changing the pivot point, we reduce the distance the top of the stick (knob end) must travel to engage the gears.

## EIBACH Springs

Eibach Springs has grown into an internationally renowned suspension company thanks to a guiding philosophy that combines old-world craftsmanship with a relentless pursuit of engineering excellence. When other springs sag or create ride and handling problems, top tuners and race teams inevitably turn to Eibach. Eibach springs are the choice for automotive enthusiasts everywhere, including factory installations by Ford, Toyota, Audi, and countless other.

**EIBACH - THE WILL TO WIN!**

### NEW!

#### PRO-STREET-S

Now using the very same Eibach technology used in Formula 1 race-cars, you can get each corner of your vehicle looking and performing at its very best. Eibach's exciting new Pro-Street-S, stainless steel-bodied coil-over spring/damper packages allow serious drivers the ability to quickly adjust the ride height and corner weight of each individual wheel, giving them the ultimate in flexibility for precise street and track tuning.

- High Performance, Eibach Tuned Coil-Overs
- The Next Level of Suspension Technology
- Quick—Adjustable Lowering: from 0.8" to 3.0"
- Optimal Damper Tuning for Aggressive Performance
- Rust-Free Stainless Steel Technology
- Legendary Eibach Suspension Quality and Tuning

### PRO-KIT SPRINGS

The Eibach Pro-Kit—the legendary spring system that dramatically improves both a vehicle's performance and appearance. We call it "The Look That Performs." The Pro-Kit is the perfect addition to any vehicle, lowering the fender gap and giving your ride a more attractive, sportier stance. By lowering the car's center of gravity, the Pro-Kit reduces squat during acceleration, body roll in corners and excessive nose-dive under braking. The Pro-Kit provides the ultimate balance that will take your passion for driving to a whole new level.

### STREET PERFORMANCE

### SPORTLINE SPRINGS

For the extreme enthusiast who wants the lowest possible ride for the street, Eibach has developed the popular Sportline brand of spring sets. Sportline makes a dramatic statement by combining race car looks with higher spring rates to maximize street performance. The result is a car that handles as well as it looks. Simply put, Sportline is the ultimate suspension solution for the hard core street enthusiast.

# Suspension Products

Three Most Valuable Reasons for using Energy Suspension® HYPER-FLEX™ performance polyurethane components instead of rubber components on cars, trucks and SUVs are improved PERFORMANCE, greater DURABILITY and custom APPEARANCE.

## HYPER-FLEX™ GET IMPROVED HANDLING, BETTER LAUNCHING and GREATER STOPPING CONTROL!

Take control with Energy Suspension's HYPER-FLEX™ performance polyurethane suspension components! Get them when adding more horsepower and torque to your vehicle and modifying the suspension. HYPER-FLEX™ components are performance durometer. Use them when adding grippier tires to diminish wheel hop on hard launches and to add greater cornering control. HYPER-FLEX™ lasts much longer than original rubber components and they don't permanently compress or rot like OEM rubber often does. For product color: place G= black or R= red after each part number.

### COMPLETE HYPER-FLEX SYSTEM™ MASTER BUSHING SETS

Get the Complete Master Set for the maximum performance! Many more sets are available than listed—please see Energy's catalog or web site. PLEASE NOTE: When ordering Master Sets, many do not include sway bar bushings due to the multiple sizes available for that vehicle and must be ordered separately.

### PERFORMANCE POLYURETHANE CONTROL ARM BUSHING SETS

Use for the front and rear of vehicles. Maintains alignment while hardcornering, stopping and fast launching—better than those too-soft OEM rubber bushings. A must for lowered vehicles where weight transfer causes distortion! Full floating and non-binding. (See Energy's catalog or web site for applications.)

### PERFORMANCE POLYURETHANE TRAILING ARM BUSHING SETS

Replaces that soft OEM rubber with durable performance polyurethane! Reengineered to dramatically help the vehicle maintain proper toe and caster under high performance driving conditions. Important to use with performance tires. (See Energy's catalog or web site for more applications.)

### PERFORMANCE POLYURETHANE FWD MOTOR MOUNT INSERTS

Designed to provide improved performance by eliminating excess motor movement, preventing unwanted wheel hop and loss of traction. Controls torque in high performance applications. Improves overall handling by stabilizing the drive train! Other applications than listed available for: Cougar, Focus, ZX2, Honda, Neon, and Sentra.
